

Test Plan

This document provides a detailed explanation based on the selected project title and its academic importance.

Project Overview

Testing focuses on login, prediction, dashboard pages, reports, analytics, and system flow.

The testing process ensures that the application behaves as expected before submission.

Technical Explanation

The plan helps identify errors, validate features, and improve reliability.

It also supports confidence in the final demonstration and evaluation.

Submission Value

This document shows that the project was verified and improved before delivery.

It strengthens the credibility of the final submission.

Test Plan - Continued

The second page expands the explanation with implementation details and project relevance.

Implementation Summary

The solution is modern, responsive, and suitable for SmartBridge submission.

It covers dashboard monitoring, prediction, reporting, and alert review in a simple workflow.

The project combines Flask, SQLite, Bootstrap, Chart.js, and Python machine learning tools.

The final deliverable is professional, documented, and ready for academic evaluation.
